- 1. (currently amended) A swivel joint for connecting to a water line in a plumbing accessory outlet, said joint comprising:
- a first member having an externally milled barrel and a second member having an internally milled barrel,

wherein said second member accommodates said first member in a leak-proof yet relatively rotatable relationship, and

wherein the first and second members are held together by a collar cylindrically shaped housing that is rotatably engaged with one member and receives the milled barrel of the other member within said housing and is adjustably engaged with the other member whereby adjustment of the collar enables the tightening of the swivel joint.

- 2. (original) A swivel joint as claimed in claim 1, wherein a recess is formed in the externally milled barrel of the first member which accommodates an o-ring.
- 3. (original) A swivel joint as claimed in claim 2, wherein the barrel of the first member is tapered to facilitate assembly with the second member which has a complementary taper.
- 4. (currently amended) A swivel joint as claimed in claim 1, wherein the second member is adapted for connecting to the fluid a water line and the first member is adapted for connecting to an attachment.
- 5. (original) A swivel joint as claimed in claim 4, wherein the first member has a screw thread on one end which mates with an internal screw thread formed in the attachment.
- 6. (currently amended) A swivel joint as claimed in claim 4, wherein the fluid line is a water line and the attachment is a shower head.
- 7. (original) A swivel joint as claimed in claim 1, wherein the first member is integrally formed on an attachment.
- 8. (original) A swivel joint as claimed in claim 7, wherein the attachment is a shower head.
- 9. (currently amended) A swivel joint as claimed in claim 1, wherein the second member is integrally formed on the fluid water line.
- 10.-11. (cancelled)
- 12. (currently amended) A swivel joint as claimed in claim 10 1, wherein the housing includes an internal wall, offset from one end of the housing, with an opening therethrough

screw thread to one side of the wall which is designed to mate with an externally threaded stem on an end of the first member extending through the opening.

- 13. (cancelled)
- 14. (currently amended) A swivel joint for connecting to a water line in a plumbing accessory outlet, said joint comprising:
  - a first element having a barrel with an externally projecting milled face, and a second element having a barrel with an externally projected milled face,

wherein a resiliently deformable sealing member is accommodated in one of the faces, and the first and second elements are held together in face-to-face relatively rotatable relationship by means of a collar cylindrically shaped housing,

wherein the cylindrically shaped housing is rotatably engaged with one member and receives the milled barrel of the outer member within said housing and is adjustably engaged with the other member whereby adjustment of the collar enables the tightening of the swivel joint.

- 15. (original) A swivel joint as claimed in claim 14, wherein the resiliently deformable sealing member is an o-ring.
- 16. (currently amended) A swivel joint as claimed in claim 44 15, wherein the o-ring is located in a recess formed in the face of the second element.
- 17. (currently amended) A swivel joint as claimed in claim 14, wherein the second element is adapted for connecting to the fluid a water line and the first element is adapted for connecting to an attachment.
- 18. (currently amended) A swivel joint as claimed in claim 17, wherein the fluid line is a water line and attachment is a shower head.
- 19.-20. (cancelled)
- 21. (currently amended) A swivel joint as claimed in claim 19 14, wherein the housing includes an internal wall, offset from one end of the housing, with an opening therethrough.
